Overview

No matter whether your technology business focuses on software, hardware, services, ASP, or ISP, security is a required business issue you must deal with in regards to your business strategy, industry, customers, partners, providers, and federal, state, and local regulations. Neglecting information security could cost you lost revenues, increased operating costs, reputation, industry relationships, and/or penalties and fines.

look, plan, act, repeat

With a proactive information security program, you can minimize risk and put practical steps in place to insure minimal loss and downtime with business continuity and disaster recovery programs. In addition, a solid security program is a significant competitive differentiator.

Pivot Group's solutions and look, plan, act, repeat methodology logically manage the many complex issues relating to an effective security strategy for technology companies. Call us today to discuss your current situation and industry requirements.
